HiFi Connective Sapphire™ Room Controller

HiFi Interconnectivity for Seamless Sound in Restaurant and Retail AV Control Applications

Access and adjust sound and energy together from a single easy-to-use interface.

Small commercial applications, such as restaurants and retail spaces, incorporate a number of technologies in the same space. Settings for sound, lighting, energy control and video are all required to keep a space's atmosphere and functionality operating at the desired levels. For retrofit or new construction, the Leviton Sapphire AV Controls with HiFi Interconnection bring the room's sound, projection, video and energy settings together on a single station. Bluetooth® inputs allow restaurants to stream custom playlists from apps like Spotify® and Pandora directly into the system. Easy to program, adjust and use, Sapphire brings a number of components scattered around a room into one centralized, organized and seamlessly controlled station.

CHALLENGE

Restaurant with multiple technology settings including sound, lighting, energy control and video desires an easy-to-use and consolidated system.

- Includes AV equipment such as speakers and television screens
- Incorporates energy controls including architectural dimming
- Streams various music playlists from a phone or tablet, which vary depending on the day and time
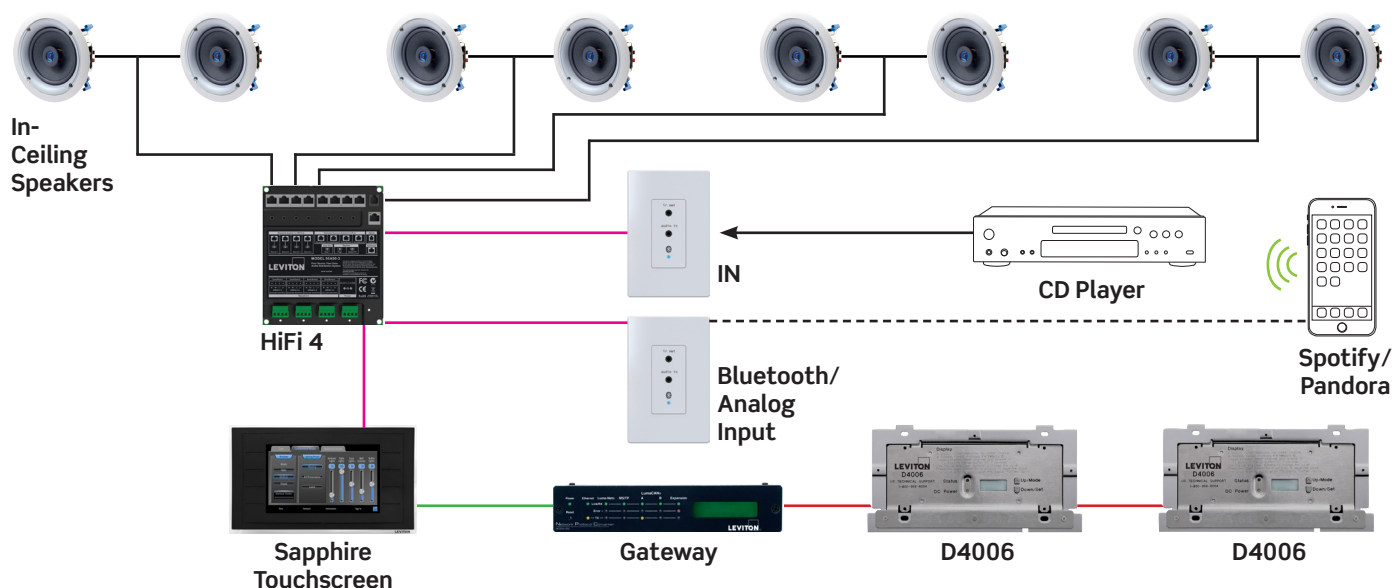

SOLUTION

Sapphire AV Controls with HiFi Interconnection control sound, video and energy controls from a single touchscreen station.

- Manages both AV controls and lighting controls from a single centralized point
- Set scenes for different usage scenarios, which are accessible from an easy-to-use interface—press a single button on the touchscreen to activate the scene
- Utilizes Bluetooth integration to stream music directly into the system from your smartphone or tablet, or via traditional CD players/MP3 docks
